Package 'SlideDesignerGUI'

August 4, 2017

Version 1.6.2

Date 2015-07-14

Title Slide Designer GUI Package

Author P. Roebuck, based on earlier work by Kevin R. Coombes

Maintainer ``P. Roebuck" <proebuck@mdanderson.org>

Description Graphical User Interface for recording layout of a slide design.

Depends R (>= 2.15)

Imports tcltk, tclish (>= 1.0.0)

SystemRequirements Tcl/Tk

NeedsCompilation no

slidedesignerGUI   *Graphical User Interface for slide design layout*

Description

Graphical User Interface for recording layout of a slide design.

Usage

```
slidedesignerGUI()
sdui()
```

Details

The function `slidedesignerGUI` launches a Graphical User Interface for recording the layout of positive and negative controls of a slide design, used with the **SuperCurve** package. The GUI uses Tk widgets (via the R-Tcl/Tk interface by Peter Dalgaard) in order to provide a simple interface.

The function `sdui` is an alias for the aforementioned function.

Resources

The Tk options database is loaded from user-specific defaults files, such as '.Xdefaults', and resource databases loaded into the X server. The package will attempt to load its resources upon startup, following the X11R5 method of merging app-default files from multiple sources. The standard X11 paths are searched first, followed by paths specified by the environment variables `XFILESEARCHPATH`, `XAPPLRESDIR`, `XUSERFILESEARCHPATH`, respectively. Unlike X11, **ALL** matching files will be loaded, not just the first.

One way to make use of the options database is to create a file named 'slidedesignerGUI.ad' in your home directory, specifying any desired resources. Set your `XUSERFILESEARCHPATH` environment variable within R with the command:
`Sys.setenv(XUSERFILESEARCHPATH=file.path(path.expand("~"), "%N.ad"))`

Author(s)

P. Roebuck <proebuck@mdanderson.org>

Examples

```
   ## Not run:
slidedesignerGUI()
# -or-
sdui()

## End(Not run)
```
